LinkedIn | GitHub | Website

Full Stack Software Engineer experienced in developing enterprise applications using React, TypeScript, Python, Java, Spring Boot, and SQL. Currently working within the OptumRx team at Optum, contributing to RxSync through full-stack feature development, REST API integrations, workflow automation, and secure backend services. Experienced across the full software development lifecycle, including front-end and backend development, database integration, testing, debugging, code reviews, and technical documentation within Agile engineering teams.

TECHNICAL PROFILE

Programming Languages	Java, JavaScript, Python, SQL
Front-End Development	React, TypeScript, HTML, CSS, JavaScript, Responsive Design, PrimeFaces, JSF
Backend	Spring (Boot, Data, Web), Node.js, Express.js, REST APIs
Databases	MySQL, MongoDB, PostgreSQL, Microsoft SQL Server
Tools & DevOps	Git/GitHub, SVN, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer | Optum (UnitedHealth Group)

Dublin, Ireland

July 2026 - Present

- Contribute to the development of RxSync, an enterprise platform that supports OptumRx Network Operations through workflow automation, API integrations, and secure backend services.
- Develop and maintain full-stack application features using React, TypeScript, Python, Spring Boot, Java, and SQL.
- Build and integrate REST APIs to support communication between front-end applications, backend services, and associated enterprise systems.
- Collaborate with engineers, product stakeholders, and other team members to understand requirements and deliver reliable, user-focused solutions.
- Participate throughout the software development lifecycle, including technical refinement, implementation, testing, debugging, code reviews, documentation, and deployment activities.
- Diagnose application and integration issues across the stack, contributing fixes and enhancements while following security and software engineering standards.
- Work within an Agile engineering team, contributing to daily stand-ups, sprint planning, backlog refinement, demonstrations, and retrospectives.

Junior Software Engineer | Strandum

Dublin, Ireland

June 2025 - June 2026

- Worked as a full-stack engineer, taking ownership of features end to end from initial design through to release.
- Built and maintained full-stack features for HR web applications using Java Server Faces (JSF) with PrimeFaces/XHTML on the front end and Java/Spring on the back end.
- Designed and optimized SQL queries, stored procedures, and database schemas in Microsoft SQL Server, improving performance and data integrity.
- Wrote clean, maintainable, and well-tested code in line with company standards, contributing to unit testing and code reviews.
- Diagnosed and fixed bugs, and delivered iterative enhancements and maintenance updates across the stack.
- Collaborated with senior engineers, designers, and product managers, participating in Agile ceremonies including stand-ups, sprint planning, and retrospectives.
- Used SVN and Git for version control, managing branches and merges and maintaining design notes, API documentation, and user guides.
- Supported internal and external users by troubleshooting software issues and following best practices for security and data protection.
- Contributed to Project Leon (v8), a major UI/UX upgrade of the enterprise HR platform, implementing pages and components, reducing load times, and improving accessibility and compliance across key workflows.

- Instructed Higher Diploma and undergraduate students in Java programming and object-oriented design principles.
- Delivered hands-on demonstrations of concepts such as inheritance, polymorphism, and encapsulation.
- Assisted students with debugging, problem-solving, and improving code quality.

EDUCATION & QUALIFICATIONS

September 2024 – February 2026 | Graduated March 2026

Master's Degree in Software Engineering, Maynooth University

Dissertation focused on full-stack web application development using Spring Boot, MongoDB, and React.

Final Grade (1.1)

September 2023 – June 2024

Higher Diploma in Science (Software Development), Maynooth University, Ireland

Final Grade 89.5% (1.1)

PROJECTS

Leaving Cert AAC | *React, TypeScript*

leavingcertaac.com

- Designed, developed, and currently maintain a live educational platform used by Leaving Certificate Biology students at Wicklow Educate Together Secondary School.
- Built an interactive project timeline that helps students track upcoming milestones, important dates, section requirements, and practical guidance throughout their coursework.
- Implemented a central noticeboard for class announcements, alongside structured tips and study resources that students can access throughout the project.
- Collaborated directly with the biology teacher to gather requirements and translate student and classroom needs into practical, user-focused features.
- Took end-to-end responsibility for the product, including design, development, deployment, maintenance, and ongoing enhancements based on real-world feedback.

Fitzpatrick Marketing Website | *Spring Boot, React, Email Service*

fitzpatrickmarketing.org/

- Built a responsive marketing website using React on the front end and Spring Boot on the back end to handle form submissions.
- Implemented a contact form and email notification service that sends submitted enquiries directly to the business owner.
- Delivered a clean, mobile-friendly UI aligned with modern web design practices.

Maynooth Mental Health App | *Node.js, React, JavaScript, MongoDB, Firebase*

vercel.com/tim-mc-sweeneys-projects/mh-front-end-wa6q

- Ongoing web application to support alcohol reduction; implemented authentication and data models with a focus on scalability and security.
- Project is hosted and receives regular daily users.

HOBBIES

- Exercising – I enjoy team sports and going to the gym.
- Learning new programming languages and taking part in coding challenges.
- Reading – Avid reader of fiction and non-fiction.
